Department of Plant Biotechnology

## I

Academic Reference Standards for Master Postgraduate Studies of Plant Biotechnology

Academic Reference Standards (ARS) for Master Postgraduate Studies, NAQAAE, March 2009

جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

-----

## 1-The graduate of Master program of any specialty must be able to:

- 1.1. Master basics and methodologies of scientific research.
- 1.2. Add to the knowledge in the specialization field.
- 1.3. Apply analytical and critical approach to the knowledge in specialty and related areas.
- 1.4. Integrate specialized knowledge with relevant knowledge by extrapolating and developing relations between the two interfaces
- 1.5. Show in depth awareness of recent theories and ongoing problems in the specialization field.
- 1.6. Identify professional problems and find innovative solutions.
- 1.7. Master a wide range of professional skills in the specialty area.
- 1.8. Work towards the development of new methods, tools and procedures in professional practice.
- 1.9. Use appropriate technological means to serve his/her professional practice.
- 1.10. Communicate effectively and lead team-work in different professional contexts.
- 1.11. Make decisions according to available information.
- 1.12. Employ available resources efficiently and work to find and develop new resources.
- 1.13. Show awareness of his/her role in community development and environmental conservation.
- 1.14. Reflect the commitment to integrity and credibility of the profession and its rules
- 1.15. Commit him/her self to continuous self-development and to transfer knowledge and experience to others

## 2- General academic standards:

## 2.1. Knowledge & Understanding:

By the end of Master program of any specialty, the graduate must have deep knowledge & understanding of:

- 2.1.1. Basic facts, theories and recent advances of the specialty and related subjects.
- 2.1.2. Basics, methodologies and scientific research ethics as its different tools.
- 2.1.3. Ethical and legal principles of professional practice.
- 2.1.4. Quality standards of professional practice.
- 2.1.5. Knowledge related to the professional practice impact on the environment development and conservation.

## 2.2. Intellectual skills:

By the end of the Master program study in any specialty, the graduate must be able to:

- 2.2.1. Analyze, evaluate and deduce the information in the specialty fields.
- 2.2.2. Solve the specialized problems according to available data.
- 2.2.3. Conduct research studies that add to specialty knowledge.
- 2.2.4. Write and publish scientific articles.

\_\_\_\_\_\_

- 2.2.5 Evaluate professional practice risks.
- 2.2.6. Plan to improve specialty performance.
- 2.2.7. Take decisions in various professional situations including dilemmas and controversial issues.
- 2.2.8. Add to the specialty field through creativity & innovation.
- 2.2.9. Manage discussions on basis of evidence and proofs.

## 2.3. Professional skills:

## By the end of Master program study in any specialty, the graduate must:

- 2.3.1. Master basic and advanced professional skills in the specialty field.
- 2.3.2. Write and appraise professional reports.
- 2.3.3. Evaluate and improve methods and tools used in the specialty.
- 2.3.4. Use technological tools to serve professional practice.
- 2.3.5. Plan for professional practice development and performance of others.

## 2.4. General & transferable skills:

## By the end of the study of Master program of any specialty, the graduate must:

- 2.4.1. Communicate effectively using different means.
- 2.4.2. Use information technology to improve professional practice.
- 2.4.3. Teach and evaluate others.
- 2.4.4. Perform self appraisal and seek continuous learning.
- 2.4.5. Use different resources to obtain information and knowledge.
- 2.4.6. Work in and lead a team.
- 2.4.7. Manage scientific meetings and time.

## Plant Biotechnology Master Program Academic Reference Standards

1. Program Graduate Attributes

جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

-----

## The graduate of the program must be able to:

- 1.1. Master basics and methodologies of scientific research in the field of plant biotechnology
- 1.2. Add to the knowledge in the field of plant biotechnology.
- 1.3. Apply analytical and critical approach to the knowledge in specialty and related areas.
- 1.4. Integrate specialized knowledge with relevant knowledge by extrapolating and developing relations between the two interfaces
- 1.5. Show in depth awareness of recent theories and ongoing problems in the field plant biotechnology.
- 1.6. Identify professional problems and find innovative solutions.
- 1.7. Master a wide range of professional skills in the specialty area.
- 1.8. Work towards the development of new methods, tools and procedures in professional practice.
- 1.9. Use appropriate technological means to serve his/her professional practice.
- 1.10. Communicate effectively and lead team-work in different professional contexts.
- 1.11. Make decisions according to available information.
- 1.12. Employ available resources efficiently and work to find and develop new resources.
- 1.13. Show awareness of his/her role in community development and environmental conservation.
- 1.14. Reflect the commitment to integrity and credibility of the profession and its rules
- 1.15. Commit him/her self to continuous self-development and to transfer knowledge and experience to others

## 2. Program Academic Standards:

### 2.1 Knowledge & Understanding

## By the end of the study of master of plant biotechnology, graduate must have sufficient knowledge & understanding of:

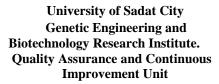

- 2.1.1 Basic facts, theories and recent advances of the plant biotechnology and related subjects.
- 2.1.2 Basics, methodologies and scientific research ethics as its different tools
- 2.1.3 Ethical and legal fundamentals (research writing supervising authorizing applying) and their applications on the field of plant biotechnology.
- 2.1.4 Quality standards of professional practice in the field of plant biotechnology.
- 2.1.5 Knowledge related to the professional practice impact on the environment development and conservation.

### 2.2 Intellectual Skills

## By the end of the master program in plant biotechnology specialty, the graduate must be able to:

- 2.2.1 Analyze, evaluate and deduce the information in the field of plant biotechnology.
- 2.2.2 Solve the specialized problems according to available data of plant biotechnology.
- 2.2.3 Conduct research studies that add knowledge to plant biotechnology.
- 2.2.4 Write and publish scientific articles in the field of plant biotechnology.
- 2.2.5 5 Evaluate professional practice risks in plant biotechnology.
- 2.2.6 Plan to improve specialty performance in the field of plant biotechnology.
- 2.2.7 Take decisions in various professional situations including dilemmas and controversial issues

.....

- 2.2.8 Add to the specialty field through creativity & innovation.
- 2.2.9. Manage discussions on basis of evidence and proofs.

## 2.3. Professional skills

## By the end of the master program in plant biotechnology specialty, the graduate must be able to:

- 2.3.1 Master basic and advanced professional skills in the field of plant biotechnology.
- 2.3.2 Write and appraise professional reports about plant biotechnology.
- 2.3.3 Evaluate and improve methods and tools used in the field of plant biotechnology.
- 2.3.4 Use technological tools to serve professional practice.
- 2.3.5 Plan for professional practice development and performance of others.

## 2.4. General & Transferable skills

## By the end of the master program in plant biotechnology specialty, the graduate must be able to:

- 2.4.1 Communicate effectively using different means.
- 2.4.2. Use information technology to improve professional practice.
- 2.4.3. Teach and evaluate others.
- 2.4.4. Perform self appraisal and seek continuous learning.
- 2.4.5. Use different resources to obtain information and knowledge.
- 2.4.6. Work in and lead a team.
- 2.4.7. Manage scientific meetings and time.

## Plant Biotechnology Master Program Specification (2015/2016)

\_\_\_\_\_

**University: University of Sadat city** 

**Institute: Genetic engineering and Biotechnology Research Institute** 

**Program Specification** 

**A-Basic Information** 

1- Program title: Master of Science in Plant Biotechnology

2- Program type: Single √ Double Multiple

3- Department: Plant Biotechnology

4- Program coordinator: Dr. Heba Shahin5- Program Approval Date: 20 /9/2015

6- Program internal reviewer: Ass.Prof. Dr. Yehia Khedr, (GEBRI, University of Sadat City)

7- Program external reviewer: Prof. Dr. Abd Alfatah Badr (Faculty of science Helwan University)

### **B- Professional Information:**

1- Program aims:

## **Preparation of Master graduate capable of:**

- 1.1 Preparing Master Graduate having capability of applying the basics and methodologies of scientific research using its different tools in the field of plant biotechnology and relating interest.
- 1.2 Enhancing basic graduate knowledge and provide specialist theory and practical training in plant molecular and biotechnology subjects.
- 1.3 Improving skills of the Master graduate in identifying problems and using available resources to solve them & to achieve highest benefits.
- 1.4 Applying analytical methods & specialized knowledge and using appropriate technological means in plant biotechnology.
- 1.5 Providing training in the science behind plant biotechnology, an appreciation of the current scope and limits to its industrial application, and the implications of modern methods of genetic modification for plant industries.
- 1.6 Imparting understanding of the principles of the plant sciences and molecular biology, as well as the integration of these disciplines, to provide healthy plants in a safe environment for food, non-food, feed and health applications.
- 1.7 Exploring the broad area of plant biotechnology, including the scientific principles underpinning these practices.

جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

\_\_\_\_\_\_

## 2- Intended learning outcomes (ILOs):

## 2/1 Knowledge and understanding:

## By the end of this program, the graduate will be able to:

- a. Describe basic facts and theories of biotechnology, general issues and application of plant gene technology.
- b. Express the basic information of plant molecular biology methods and their application.
- c. Classify the different methods of analysis for plant natural products, secondary metabolites, methods of plant breeding.
- d. Summarize fundamental of plant breeding and its use in plant improvements against insects and plant diseases, plant cell, tissue and organ culture, plant growth regulators and its application for plant production.
- e. Describe the principles of genetics and cytogenetics, plant genetic protection, plant tissue culture techniques, plant transformation, plant propagation, hydroponics, roles of plant diseases and control, plant molecular pathology, and the main concept of somatic embryogenesis and somaclonal variation.
- f. Express the attitudes and ethical basis in scientific research and in plant biotechnology and summarize main basics & ethics of scientific researches.
- g. Write list of the basic rules and scientific terms of English language in plant biotechnology area.
- h. Acquire the necessary knowledge base of computer science in plant biotechnology.

### 2/2 Intellectual abilities:

## By the end of this program, the graduate will be able to:

- a. Appoint suitable methods for different biological treatment of plant biotechnology, and plant tissue culture.
- b. Plan the identification of plant gene technology and role of plant growth regulators in plant development.
- c. Compare among different aspects of plant improvement through plant molecular biology and cytogenetics, plant breeding, and plant transformation and somaclonal variation.
- d. Interpret different information to solve the problems of different stress facing plant biotechnology, plant breeding, and propagation.
- e. Analyze the natural products in plants; diagnose plant diseases using an integrated multidisciplinary approach.
- f. Derive issues which the scientifics facing during plant improvement and biotechnology and take a professional decision for suitable methods to improve the productivity and quality of plants and plant genetic protection.
- g. Plan paraphrasing English technical terms processes used in scientific researches.

## 2/3 Professional Skills:

جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

## By the end of this program, the graduate will be able to:

- a Apply the different methods for plant improvement via plant biotechnology.
- b Measure natural plant products and diagnose plant diseases through molecular methods.
- c Evaluate techniques and tools during the experimental part of research.
- d- Prepare technical reports and scientific essay

### 2/4. General and transferable Skills:

## By the end of this program, the graduate will be able to:

- a- Communicate effectively using all methods with public, collegeous and appropriate authorities.
- b- Use information technology to improve professional practice in internet and relative information.
- c- Practice self appraisal and determines his/her learning needs.
- d- Use different sources of information to obtain data for a given course topics.
- e- Work in teams and manage time effectively.
- f- Work as team leader in situation comparable to his level.
- g- Learn independently and seek continuous learning in plant biotechnology.
- h- Take professional decision for suitable methods in plant biotechnology subjects.
- i- Manage time efficiently with other groups.

## **3- Program Academic standards:**

Academic Standards of plant Biotechnology PhD program was prepared according to Graduate Attributes from NAQAAE and approved in department council  $\mathbb{N}_{2}$  ( ) date /9/2015, and in faculty council  $\mathbb{N}_{2}$  ( ) date / /2015.

## 3.1 Knowledge & Understanding

## By the end of Master Program in plant biotechnology, the graduate should have sufficient knowledge & understanding of:

- 3.1.1 Basic facts, theories of the plant biotechnology and related subjects.
- 3.1.2 Mutual effects between professional practice and environment of plant biotechnology and effects on environment.
- 3.1.3 Main scientific advances of plant biotechnology practice.
- 3.1.4 Ethical and legal fundamentals and their application in the field of plant biotechnology researches.
- 3.1.5 Quality standards of professional practice in the field of plant biotechnology.
- 3.1.6 Basics and ethics of scientific research in the field of plant biotechnology.

### 3.2 Intellectual Skills

By the end of Master Program in plant biotechnology, the graduate must be able to:

جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

------

- 3.2.1 Interpret, analyze & evaluate the information to solve problems in the field of plant biotechnology.
- 3.2.2 Solve some problems that do not conform to classic data regarding plant biotechnology.
- 3.2.3 Integrate different information to solve professional problems in the field of plant biotechnology.
- 3.2.4 Conduct a scientific research and/ or write scientific systematic approach to a research problem (hypothesis) in the field of plant biotechnology.
- 3.2.5 Evaluate professional risks of plant biotechnology.
- 3.2.6 Plan for professional improvement in the field plant biotechnology.
- 3.2.7 Take professional decisions in plant biotechnology fields.

## 3.3. Professional and Practical skills

## By the end of Master Program in plant biotechnology, the graduate must be able to:

- 3.3.1 Competent in all basic and some of the advanced professional skills in plant biotechnology fields.
- 3.3.2 Write and appraise reports about plant biotechnology.
- 3.3.3 Evaluate methods and tools used in plant biotechnology fields.

## 3.4. General & Transferable skills

## By the end of Master Program in plant biotechnology, the graduate must be able to 3.4.1

Communicate effectively using all methods.

- 3.4.2 Use information technology to improve professional practice.
- 3.4.3 Practice self appraisal and determines learning needs.
- 3.4.4 Utilize different information sources to obtain data. Share in determination of standards for evaluation of others (e.g.: subordinates/ trainees etc.)
- 3.4.5 Determine standards for evaluation of others (e.g.: subordinates/ trainees etc.)
- 3.4.6 Work in and lead a team in comparable work level..
- 3.4.7 Manage time effectively.
- 3.4.8 Learn independently.

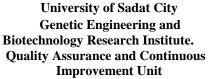

## 4- Bench Marks: ARS

There is external Bench Mark for specialist interest of plant biotechnology.

pathology- I

Molecular methods in plant

All MSc-degree students should prepare a thesis in plant biotechnology. The department and the ethical committees must approve the protocol of the research. The thesis should include a review part and a research part. The thesis is supervised by one or more senior staff members of the plant Biotechnology Department and may include other specialties according to the nature of the research. The thesis should be evaluated and approved by a committee of three professors including one of the supervisors and an external professor.

## 7. Program admission requirements:

- Bachelor degree in appropriate practical faculty from one of the Egyptian Universities or an equivalent with minimal general grade (Acceptable).
- Or Diploma from plant biotechnology department in the Institute.

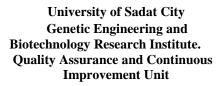

## 8. Regulations for progression and program completion:

Successful completion of the required courses (equivalent to at least 12 units, 4 courses containing at least one practical course) in addition to compulsory courses: English language, Computer, Research and research methodology, special topics and Seminars.

- Student success in any course of study is estimated in one of the following estimates:

| Excellent | From 90 to 100 degrees          |
|-----------|---------------------------------|
| Very Good | From 80 to less than 90 degrees |
| Good      | From 70 to less than 80 degrees |
| Pass      | From 60 to less than 70 degrees |

\_\_\_\_\_

- Approved completion of the research experiments.
- Approved scientific writing of M.Sc. thesis.
- Successfully passes of thesis open defense examination

## 9. Program admission requirements:

| No. | Method                                               | Intended Learning Outcomes ' ILO's '                                                                                                                                                                                                                                    |
|-----|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1   | Semester Works (5 <sup>th</sup> & 10 <sup>th</sup> ) | Measure Problems Solving Skills, Presentation Data and Discussion and Work on team.                                                                                                                                                                                     |
| 2   | Midterm Exam (6 <sup>th</sup> ) Week.                | Measure Abilities on Concentration and understanding Scientific Points & Background.                                                                                                                                                                                    |
| 3   | Oral Exam (14 <sup>th</sup> ) Week.                  | Measure Analysis, Presentation and Discussion Skills.                                                                                                                                                                                                                   |
| 4   | Written (Final) Exam (15 <sup>th</sup> ) Week.       | Measure Remembering & Innovating Skills.                                                                                                                                                                                                                                |
| 5   | Thesis discussion                                    | To assess the ability to write a review article, perform the needed practical steps and to present the results in tables and graphs.  In addition, the skills of analysis of results and discussion with previous findings obtained by other authors are also assessed. |

## 10. Program Evaluation methods:

|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | Providing participants with the skills, knowledge and experience that are needed to pursue a successful career in biotechnology. The course focuses on the adaptation and application of biological processes for environmental and industrial use. This course would be suitable for graduates with a primary degree in the Biological Sciences who wish to extend their knowledge and skills for a career in the biotechnology sector. |

| 3. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                    |
|-------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| a. Knowledge and Understanding:                 | a/1- Recognize the basic rules of bioprocess technology, genetic technology and immunodiagnostics. a/2- Outline the fundamentals protein technology and bioremediation. a/3- Describe quality standards for the efficient and safe running of industrial biotechnology enterprises |
| b. Intellectual skills:                         | b/1- Link between bioprocess technology and its applications.<br>b/2- Explain the various types of protein technology.<br>b/3- Discuss the quality standards of industrial biotechnology.<br>b/4- Differentiate the different methods of bioremediation process.                   |
| c. Professional Skills of course:               | c/1- Deal with the various methods bioprocess technology, protein technology and bioremediation. c/2- Apply the various methods for genetic technology. c/3- Determine the quality standards of industrial biotechnology.                                                          |
| d. General and Transferable Skills              | d/1- Experience in getting knowledge from data sources, e.g., text books, scientific journals, internet, multimediaetc. d/2- Create thinking skills through analysis of data. d/3- Acquire of self confidence and leadership skills.                                               |

| 10. | Course Aims |                                                                                                                                                                                                                                                  |
|-----|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|     |             | <ul><li>1-Demonstrating principles of soil fertility and plant nutrition.</li><li>2- Defining how plant grows and the elements essential for successful crop production.</li><li>3-Applying applications of Biofertilization in Egypt.</li></ul> |

| 2- Intended Learning Outcomes of Course (ILO's) |                                                              |
|-------------------------------------------------|--------------------------------------------------------------|
| outcomes of course (120 s)                      |                                                              |
| e. Knowledge and                                | a/1- Describe Commercial use of Biofertilization agents:     |
| Understanding:                                  | Status and prospects                                         |
|                                                 | a/2- Classify the basic rules of The Commercial use of       |
|                                                 | Biofertilization in Organic farms in Egypt.                  |
|                                                 | a/3- Summarize the fundamentals Biofertilization, Progress,  |
|                                                 | Problems and potential.                                      |
|                                                 | a/4- Describe the Physiological approaches to improve the    |
|                                                 | ecological fitness of Biofertilization.                      |
| f. Intellectual skills:                         | b/1- Interpret the various types of fertilizers.             |
|                                                 | b/2- Analyze the environmental risks, biological effects of  |
|                                                 | toxicants, and genetic modified microorganisms in            |
|                                                 | Biofertilization treatment.                                  |
|                                                 | b/3- Plan to the methods of industrial pollution control,    |
|                                                 | main concepts of food chemistry and toxicants,               |
|                                                 | environmental qualities in lab and in field and              |
|                                                 | environmental engineering processes                          |
| g. Professional Skills of course:               | c/1- Apply the various methods of fertilization for          |
|                                                 | evaluation of environmental risks, pollution in air,soil     |
|                                                 | and water.                                                   |
|                                                 | c/2- Adjust plant biotechnology application for agricultural |
|                                                 | problems.                                                    |

جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

|                             | c/3- Adjust the various Biofertilization methods to produce clean and high yield. |
|-----------------------------|-----------------------------------------------------------------------------------|
| h. General and Transferable | d/1- Work on compost formation.                                                   |
| Skills                      | d/2- Appear administration skills Biofertilization, Progress,                     |
|                             | Problems and potential                                                            |
|                             | d/3- Appear self learning abilities in getting knowledge from                     |
|                             | data sources, text books and internet.                                            |
|                             | d/4- Use different sources of information to obtain data for a                    |
|                             | given plantation technologies                                                     |
|                             | d/5- Use educational technology displaying devices for                            |
|                             | explain important modern techniques of presentation.                              |
|                             | d/6- Manage time effectively and work effectively in                              |
|                             | teamwork.                                                                         |

|             | 3-Course Contents:                                                                               |
|-------------|--------------------------------------------------------------------------------------------------|
| Week<br>No. | Topic                                                                                            |
| 1&2         | Fertilizers, Progress, Problems and potential (in vivo and in vitro).                            |
| 3&4         | The Decomposition process and the environmental and agricultural benefits depending on using it. |
| 5&6         | Production, Stabilization and Formulation of compost formation.                                  |
| 7&8         | Physiological approaches to improve the ecological fitness of the biofertilization agents.       |
| 9&10        | The different mechanisms of biofertilizers affecting soil and plant nutrition.                   |
| 11&12       | Application of biofertilization.                                                                 |
| 13&14       | The Commercial use of Biofertilization in Organic farms in Egypt.                                |

| 4- Teaching and Learning Methods |                                                                                  |
|----------------------------------|----------------------------------------------------------------------------------|
|                                  | 1-Lectures 2- Practical classes. 3-Discussion sessions 4- Seminars. 5- Exercises |

| 5- Teaching and Learning Methods (for | Not applicable |
|---------------------------------------|----------------|
| students with special needs)          |                |
|                                       |                |

جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

| 6- Student Assessment:      |                                                                                                                                          |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| d. Assessment Methods:      | *Semester works, *Midterm exam, *Oral exam, *Written (Final) exam.                                                                       |
| e. Assessment Schedule      | * (5 <sup>th</sup> &10 <sup>th</sup> weeks),<br>* (6 <sup>th</sup> ) Week,<br>* (14 <sup>th</sup> ) Week,<br>* (15 <sup>th</sup> ) Week. |
| f. Weighting of Assessments | 10 degrees ratios 10%, 10 degrees ratios 10%, 20 degrees ratios 20 %, 60 degrees ratios 60% Total 100 degrees ratios 100%                |

| 7- List of References:        |                                                                                                                                                                                                                                                                         |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| a. Notes                      | - Lectures on plant biotechnology prepared by some of the professors in the department Computer presentations (CD and data show).                                                                                                                                       |

| 12. Course Aims |                                                                                                                                                                                                                                               |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | 1- Awarding Master graduate students with the fundamental knowledge of English language required to solve practical and theoretical problems in the research field.                                                                           |
|                 | <ul><li>2- Studying language science as talking, understanding of the main points of tutorial readings, and additional relevant information.</li><li>3- Dealing with the proper own conclusions about the opinion/argument/ thesis.</li></ul> |
|                 | 4- knowing the main divisions of the fundamental concepts of presentation topic, Observation; repetition, and pre-evaluation                                                                                                                  |

| 13. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| i. Knowledge and Understanding:                  | <ul> <li>a/1- Describe the basic English language skills as understanding, Talking, presentation and conversation.</li> <li>a/2- Summarize the basic rules of talking, demonstrating and understanding of the main points of tutorial readings.</li> <li>a/3- Divide the fundamentals of structuring the Oral Presentation.</li> <li>a/4- Summarize the fundamentals of Preparing handouts and visual aids; structuring the Oral Presentation.</li> <li>a/5- Clarify difference between various methods of preparation English articles.</li> </ul> |
|                                                  | b/1- Distinguish methods for reading background materials.<br>b/2- Derive the relationships between the various kinds of preparing and delivering presentations.                                                                                                                                                                                                                                                                                                                                                                                    |

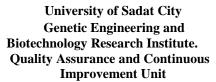

## جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

| j. Intellectual skills:              | b/3- Interpret the main points of tutorial readings, and       |  |
|--------------------------------------|----------------------------------------------------------------|--|
|                                      | additional relevant information.                               |  |
| k. Practical and Professional Skills | c/1- Prepare remarks about observation; repetition, and pre-   |  |
| of course:                           | evaluation of other students in the English course.            |  |
|                                      | c/2- Select various methods for evaluation of different        |  |
|                                      | English skills                                                 |  |
|                                      | c/3- Prepare various methods for reading background            |  |
|                                      | English materials.                                             |  |
|                                      | c/4- Adjust the various methods for preparation of             |  |
|                                      | presentations.                                                 |  |
|                                      | c/5- Excute some different handouts and visual aids related to |  |
|                                      | English language.                                              |  |
| l. General and Transferable Skills   | d/1- Use Internet to get knowledge from data sources, e.g.,    |  |
|                                      | text books, scientific journals, internet,                     |  |
|                                      | multimediaetc.                                                 |  |
|                                      | d/2- Read with Efficiency through different English articles.  |  |
|                                      | d/3- Appear self learning abilities in workshops and training  |  |
|                                      | courses.                                                       |  |
|                                      | d/4- Use Application of Computer in the field of English       |  |
|                                      | course.                                                        |  |
|                                      | d/5- Appear managements skills to manage scientific            |  |
|                                      | seminars and presentation.                                     |  |
|                                      | d/6- Work on team effectively.                                 |  |
|                                      | d/7- Use Audio & Video Means For Displaying Information.       |  |

|     | 14. Course Contents:                                                                                                                       |
|-----|--------------------------------------------------------------------------------------------------------------------------------------------|
| No. | Торіс                                                                                                                                      |
| 1   | Introduction and definition of English language and its relation to the study of Genetic Engineering and Biotechnology (GEB).              |
| 2   | Historical perspective of this study and the role of language as a means.                                                                  |
| 3   | Scope and importance of (GEB) through language debates in lecture.                                                                         |
| 4   | Describing experiments and their processes in language workshops inside lectures in two or more groups with commentary.                    |
| 5   | Suggesting paper handouts on topics such as: polymerase chain reaction, DNA profiling, human genome projects, and gene transfer technique. |
| 6   | Public perception of Biotechnology in Arab countries in general and Egypt in particular with                                               |

# Course Specifications 25. Course information: Course Code: A-65 Course Title: Physiology of Plant Growth Regulators No. units 3 Lec. Plant Biotechnology Plant Biotechnology

#### 26. Course Aims

- 1- Providing students with the fundamentals terms and concepts, methodology for extraction, purification and determination of Plant growth substances.
- 2- Introducing students with chemistry, mechanism of action and biological effects of auxin, cytokinins, and gibberellins.
- 3- Enhancing students' knowledge about growth inhibitors, growth and retardants and their application.

| 27. Intended Learning             |                                                                   |
|-----------------------------------|-------------------------------------------------------------------|
| Outcomes of Course (ILO's)        |                                                                   |
|                                   |                                                                   |
|                                   |                                                                   |
| q. Knowledge and Understanding:   | a/1 Describe basic rules of plant hormones and growth regulators  |
|                                   | a/2 Describe understanding the fundamentals of plant hormones     |
|                                   | and growth regulators and its application                         |
|                                   | a/3 Summarize outline the general issues and application of plant |
|                                   | growth retardants and inhibitors.                                 |
|                                   | a/4Outline the general issues and application of plant            |
|                                   | hormones and growth regulators                                    |
| r. Intellectual skills:           | b/1 Compare the various types of hormones and growth regulators . |
|                                   | b/2 Analyze and explain how crop plants developed and the role    |
|                                   | of plant hormones and growth regulators                           |
|                                   | b/3 Explain the plant growth retardants, inhibitors and its       |
|                                   | application                                                       |
|                                   | b/4 Solve specialized problems according to available data.       |
| s. Professional Skills of course: | c/1 Apply the plant hormones and growth regulators for improving  |
|                                   | the high yield.                                                   |
|                                   | c/2 Apply the various methods for application of plant hormones   |
|                                   | and growth regulators                                             |
|                                   | c/3 Apply the various methods for application of plant growth     |
|                                   | retardants and inhibitors                                         |

|             |                                                                                                | c/4 Write & evaluate professional reports                                 |  |  |

|-----|-------------|---------------------------------------------------------------------|
| 32. | Course Aims | 2/1 introducing students to understand the concept of plant         |
|     |             | biotechnology and the principles, practices and application of      |
|     |             | plant tissue culture and transformation in science, agriculture and |
|     |             | industry.                                                           |
|     |             | 2/2 acquainting students with experimental design and analysis of   |
|     |             | plant biotechnology experiments.                                    |
|     |             | 2/3 giving students hands-on experience and training in             |
|     |             | representative plant tissue culture and genetic engineering         |
|     |             | techniques.                                                         |
|     |             | 2/4 exposing students to issues and challenges encountered in the   |
|     |             | area of plant biotechnology.                                        |

| 3. Intended Learning Outcomes of O | Course (ILO's)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| u. Knowledge and Understanding:    | a/1 Express the techniques of plant tissue culture, micropropagation and plant regeneration via organogenesis and somatic embryogenesis.  a/2 Classify the application and benefit of plant biotechnology techniques and express various aspects of plant biotechnology  a/3 Describe concept of plant biotechnology and summarize the technology of plant quality and crop improvement a/4 Divide the methods of genetic improvement of plants through somatic hybridization, genetic transformation and molecular markers and farming. |
| v. Intellectual skills:            | b/1 derive how plant improved and enhanced using tools of plant biotechnology. b/2 Compare among different methods of somatic hybridization, genetic transformation and molecular markers and farming. b/3 Plan and to produce regenerate and manipulate plants starting from single cell or tissue.                                                                                                                                                                                                                                     |

| 34. Course Aims |                                                                                                                                                                |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | Discussion of reproductive systems of higher plants; the genetic basis for plant improvement and the selection, evaluation, and utilization of crop varieties. |

| 35. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| y. Knowledge and Understanding:                  | a1) Recognize the basic rules of plant tissue culture, plant pathology, plant breeding, biotechnology of secondary products, breeding of disease-resistant plants, plant physiology, biotechnology of field, horticulture, vegetable and ornamental crops, and mushroom propagation.  a2) Know the basic rules of plant breeding science, technology and molecular breeding and its biological impacts and genetic application.  a3) Know the basics of breeding to insect resistance, stresses resistance and tolerance, especially the molecular breeding, genetic protection, gene technology and population biology |
| z. Intellectual skills:                          | <ul><li>b1) Discuss the different methods of plant breeding and its application.</li><li>b2) Suggest programs for breeding to produce plants resistant or tolerant to different stresses, biotic or abiotic.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                  |
| aa. Professional Skills of course:               | <ul><li>c1) Perform laboratory and field tests for molecular markers for plant breeding.</li><li>C2) Apply the genetic modified plants for improving the</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

high yield and plant disease and insect resistances.

bb. General and Transferable
Skills

d1) Collect the knowledge from data sources, e.g., text books, scientific journals, internet, multimedia.....etc.
d2) Acquire of self confidence and leadership skills.
d3) Work effectively in teamwork.
d4) Create thinking skills through analysis of data.
d5) Experience in the plant biotechnology, transformation,

breeding and crop evolution.

|                 | <ol> <li>Transferring the most updated skills and technologies in the area of secondary metabolites production, via in vivo and /or in vitro.</li> <li>Enhancing students and researches capabilities and storming their knowledge, intellectual and practical skills.</li> <li>Attaining the importance of various factors affecting plant secondary metabolites production.</li> <li>Appointing information to link between secondary metabolites production, extraction and various methods of chemical analysis.</li> </ol> |

| 42. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| cc.Knowledge and Understanding:                  | al- Summarize the basic theories of secondary products biosynthesis and recognize the basic rules of biotechnology of secondary metabolites. a2- Classify the different methods of production and analysis of secondary metabolites. a3- Divide the fundamentals of plant cell, tissue and organ culture and its application in plant propagation and production of secondary metabolites. a4- Express the most important scientific term in secondary products field. |

# جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

| dd. Intellectual skills:            | b1- Compare between the general issues and application of plant biotechnology.                                                                                                                                                                |  |  |  |  |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
|                                     | b2- Derive information to evaluate the biological methods, affecting secondary metabolites production                                                                                                                                         |  |  |  |  |
|                                     | b3- Interpret methods of natural products by using different chemical methods.                                                                                                                                                                |  |  |  |  |
|                                     | b4- Analyze, determine and prioritize problems in the field of secondary metabolites biotechnology.                                                                                                                                           |  |  |  |  |
| ee.Professional Skills:             | c1- Measure and analyze data of different experiments in field of plant tissue culture.                                                                                                                                                       |  |  |  |  |
| ff. General and Transferable Skills | d1- Use internet to collect the knowledge from data sources, e.g., text books, scientific journals,etc d2- Appear management skills to acquire of self confidence and leadership skills d3-Use audio & video means for displaying information |  |  |  |  |
|                                     | Organize and manage scientific seminars and presentation d4- Appear self-learning and distance learn capabilities in secondary metabolites biotechnology field.                                                                               |  |  |  |  |

|     | 43. Course Contents:                                                                                         |
|-----|--------------------------------------------------------------------------------------------------------------|
| No. | Торіс                                                                                                        |
| 1   | Introduction of secondary metabolites and plant tissue culture. Hypotheses of secondary metabolite formation |
| 2   | Production of secondary metabolites via different biotechnology techniques.                                  |
| 3   | Factors affecting secondary metabolites production.                                                          |
| 4   | Enhancement of secondary metabolites production.                                                             |
| 5   | The storage of plant cell culture and its effect on metabolites.                                             |
| 6   | Extraction and chromatographically methods of secondary metabolites.                                         |
| 7   | Topics in plant biotechnology of secondary metabolites. (Student's presentation)                             |

| 44. | Teaching and Learning Methods |                                                                                                                                    |

| No. units               | 3 Lec. 3 App. Level M. |                                               | M.Sc |  |       |
| Department              | Plant Biotechnology    |                                               |      |  |       |

| 47. | Course Aims |                                                                                                                                                                                                                                                                                                                                                 |
|-----|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|     |             | 2/1 introducing students to the basic information about field crop biotechnology 2/2 acquainting students with experimental design and analysis of plant biotechnology experiments. 2/3 giving students with the applications of field crop biotechnology and its uses and to develop the laboratory skills of students on plant biotechnology. |

| 48. Intended Learning            | 48. Intended Learning Outcomes of Course (ILO's)                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| gg. Knowledge and Understanding: | a/1 Express the concept and applications of plant cell and tissue culture. a/2 Summarize genetic transformation techniques. a/3 Describe the application of plant biotechnology for crop improvement a/4 Describe the theories and application of molecular techniques a/5 Divide various aspects of Post-transcriptional gene silencing (PTGS) and its application and DNA-based molecular markers and their application.      |  |  |  |
| hh. Intellectual skills:         | b/1. Compare between gene silencing and post-transcriptional gene silencing, genomic Library and cDNA Library. b/2. Plan to solve problems plant diseases and abiotic stresses by genetic transformation techniques and molecular markers. b/3. Analyze mode of action of restriction enzymes. b/4. Interpret the mechanism of PTGS and derive application of plant tissue culture in plant biotechnology and crop improvement. |  |  |  |

ii. Professional Skills of course:

course:

c/2 Execute a variety of experimental procedures in the laboratory.

c/3 Form and devise experimental methods appropriate for tackling a particular problem

d/1) Collect the knowledge from data sources, e.g., text books, scientific journals, internet, multimedia...etc

d/2) Acquire of self confidence and leadership skills, Self-learn and

distance learn capabilities.

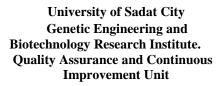

| 49. | Course Contents:                                                                                   |  |
|-----|----------------------------------------------------------------------------------------------------|--|
| No. | Topic                                                                                              |  |
| 1   | Crop biotechnology and its scope. Plant cell, tissue and organ culture.                            |  |
| 2   | Elementary idea of theory and application of molecular techniques.                                 |  |
| 3   | Gene silencing and post-transcriptional gene silencing (PTGS). Biofertilisers and bioinsecticides. |  |
| 4   | Restriction enzymes. Vectors and gene cloning.                                                     |  |
| 5   | Libraries and molecular probes. Polymerase chain reaction (PCR).                                   |  |
| 6   | Methods of gene transfer in plants. Transgenic plants in dicots and monocots.                      |  |
| 7   | A brief idea of DNA-based molecular markers and their application.                                 |  |

| 50. | Teaching and Learning Methods |    |                     |
|-----|-------------------------------|----|---------------------|
|     |                               | 1. | Data show           |
|     |                               | 2. | Scientific Journals |
|     |                               | 3. | Text books          |
|     |                               | 4. | Internet            |

### **Course Specifications**

| 52. Course information: |                     |                         |  |         |           |             |          |
|-------------------------|---------------------|-------------------------|--|---------|-----------|-------------|----------|
| Course Code:            | B3-26               | Course Title:           |  | Genetic | s and cyt | ogenetics i | in crops |
| No. units               | 3                   | 3 Lec. 3 App. Level MSc |  |         |           | MSc         |          |
| Department              | Plant Biotechnology |                         |  |         |           |             |          |

| 53. Course Aims |                                                                                                                                                                                                                   |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | 2/1 introducing the fundamentals of genetics and cytogenetics. 2/2 investigating the basic laws of chromosome structure, number, chromosome aberrations, and sex linked chromosomes and inherited.                |
|                 | 2/3 acquainting students with knowledge of extra chromosomal inheritance and the mode of reproduction in plants, particularly apomixis, as well as the molecular basis of heredity, genomic in situ hybridization |
|                 | 2/4 exposing students to issues and challenges encountered in the classical and molecular methods of genome analysis. The cytogenetic basis of somaclonal variation generated through cell and tissue culture.    |

| 54. Intended Learning Outcome | s of Course (ILO's)                                                                                                                                                                                                                                                                                              |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| kk. Knowledge and             | a/1 Describe the basic of Genetics and Cytogenetics in crop                                                                                                                                                                                                                                                      |
| Understanding:                | plants. a/2 Classify the genetic variability with emphasis on interrelationships of cytological and genetic concepts. a/3.Express various aspects of classical and modern techniques in the handling of chromosomes, karyotype analysis, genetics of meiosis, genomic relationships, and chromosome manipulation |
| ll. Intellectual skills:      | b/1 Plan, conduct and write report on Handling of plant                                                                                                                                                                                                                                                          |

# جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

|                                        | chromosomes. b/2. Analyze Karyotyping of plant chromosomes. b/3. Interpret and evaluate changes in chromosome number and structure                                                                                                                                                                                      |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Professional Skills:                   | c/1 apply, or adapt, practical instructions safely and accurately c/2 Execute a variety of experimental procedures in the laboratory. c/3 Form and devise experimental methods appropriate for tackling a particular problem c/4 Interpret quantitatively the results of experiments undertaken by themselves or others |
| mm. General and Transferable<br>Skills | d/1 make use of IT (word processing, spreadsheets and databases, web sources) and communicate scientific ideas d/2 give oral presentations and work as part of a team                                                                                                                                                   |
|                                        | d/3 use library resources and manage time                                                                                                                                                                                                                                                                               |

| 55. | Course Contents:                                                                      |
|-----|---------------------------------------------------------------------------------------|
| No. | Торіс                                                                                 |
| 1   | Introduction to course strategic goals and objectives. Handling of plant chromosomes. |
| 2   | Handling of plant chromosomes. Cell division: Mitosis and Meiosis                     |
| 3   | Genetic control of meiosis                                                            |
| 4   | Mode of reproduction in plants                                                        |
| 5   | Karyotype analysis                                                                    |
| 6   | Chromosomal aberrations – structural chromosome changes.                              |
|     | Chromosomal aberrations – numerical chromosome changes                                |
| 7   | Genome analysis. Chromosomal Aberrations in Cell and tissue culture                   |

#### **Course Aims**

- 1-Qualify the preeminent scientific staff (post- graduate students and researches) in both academic and applied field able to handing with the changeable requirements of the field of plant biotechnology. 2-Enhance students and researches capabilities and storming their intellectual and practical skills.
- 3-Transfer the most updated skills and technologies in the area of plant technology to the scientific staff via accomplishment of workshops, meeting and conferences.
- 4- Applying analytical methods & specialized knowledge and using appropriate technological means in hydroponics systems.

| 3. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                 | a/1 Express and recognize the basic rules of hydroponics technology and methods of its evaluation and application. a/2 Summarize and Know the general concept of hydroponics biotechnology and its impact on environment and application a/3 Ethical and legal Principals for professional practice in the field of plant culture a/4 Describe outline the general issues an application of hydroponics a/5 Summarize fundamental hydroponics and its use in plant improvements against insects and plant diseases, plant cell, tissue and organ culture and its application for plant propagation. |

# جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

b. Intellectual skills: b/1 Comprehend the general issues and application of differnent systems of hydroponics b/2 Link between the hydroponics systems and the application under Egyptian environment b/3 Analyze & Evaluate the information in the field of hyroponics system and Measuring it for solving problems b/4 Interpret different information to solve the problems of different nutrition and propagation. c. Professional Skills: c/1 Evaluate & develop methods & tools based on the field of contrrol systems c/2Apple the various methods of propagation through hydroponics systems c/3 Write professional reports related hydroponics and culture mrthods c/4 Prepare technical reports and scientific essay d. Transferable Skills d/1 Acquire of self confidence and leadership skills d/2 Organize and manage scientific seminars and presentation d/3 Work effectively in teamwork d/4 Work in teams and manage time effectively.

| nn. Knowledge and Understanding:                 | a1) Recognize the basic rules of plant tissue culture, plant pathology, plant breeding, biotechnology of secondary products, breeding of disease-resistant plants, plant physiology, biotechnology of field, horticulture, vegetable and ornamental crops, and mushroom propagation.  a2) Know the basic rules of plant breeding science, technology and molecular breeding and its biological impacts and genetic application. |
| oo. Intellectual skills:                         | b1) Discuss the different methods of plant breeding and its application.                                                                                                                                                                                                                                                                                                                                                        |
| pp. Professional Skills:                         | <ul><li>c1) Perform laboratory and field tests for molecular markers for plant breeding.</li><li>c3) Apply the genetic modified plants for improving the high yield and plant disease and insect resistances.</li></ul>                                                                                                                                                                                                         |
| qq. General and Transferable                     | d1) Acquire of self confidence and leadership skills.                                                                                                                                                                                                                                                                                                                                                                           |

|                 | <ol> <li>Preparing highly qualified and market-ready graduates in plant natural products, competitive at the national and international level, in both academic and applied fields.</li> <li>Applying and able to handling the changeable requirements of the field of plant natural products.</li> <li>Enhancing students and researches capabilities and storming their knowledge, intellectual and practical skills in the area of natural products.</li> </ol> |
|                 | 4- Demonstrating awareness of the ongoing problems in the surrounding natural product from plant.                                                                                                                                                                                                                                                                                                                                                                  |

| 68. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| rr.Knowledge and Understanding:                  | a/1 summarize the basics of scientific research and different research methodology (approaches) adopted to solve scientific problems. a/2 Express the general issues and application of plant biotechnology in the field of natural products. a/3 Classify main scientific advances of using General biology and Molecular genetics Biochemistry of nucleic acids. a/4- Describe the different methods of analysis for the plant natural products. |

ss. Intellectual skills: b/1 Deduce scientific output from the given research information. b/2 Comprehend the general issues, biosynthesis and application of plant natural products b/3 Link between the plant biotechnology and the application under Egyptian environment. tt. Professional Skills: c/1 understanding the different formula for growth media of specific biological plant organs and different groups of fungi and bacteria. c/2 Deal with the various methods for evaluation, and analysis of plant natural products. d/1 Acquire of self confidence and leadership skills. **General and Transferable** uu. d/2 Work effectively in teamwork **Skills** d/3 Use Application of Computer in the Field of Interest d/4 Appear self learning abilities in the field of interest,

| 81. Course Aims |                                                                                                                                                                                                                                                    |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | 1. Providing students with fundamental structure and reproductive features of crops. Their adaptation and importance in global agriculture.                                                                                                        |
|                 | 2. Practicing and inputs needed for economic production of a quality product and interaction of these factors within the constraints of climate, soils, and topography in maintaining a quality environment.                                       |
|                 | 3. Applying breeding for abiotic tolerance. Experimental approaches for examining genetics of genotype-environment interactions, expression and stability of abiotic tolerance and breeding strategies for developing abiotic tolerance cultivars. |

| 82. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| zz. Knowledge and Understanding:                 | a1) Recognize the basic rules of plant tissue culture, plant pathology, plant breeding, biotechnology of secondary products, breeding of disease-resistant plants, plant physiology, biotechnology of field, horticulture, vegetable and ornamental crops, and mushroom propagation.  a2) Know the basic rules of plant breeding science, |

|                                         | technology and molecular breeding and its biological impacts and genetic application. a3) Know the basics of breeding to insect resistance, stresses resistance and tolerance, especially the molecular breeding, genetic protection, gene technology and population biology |  |
|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| aaa. Intellectual skills:               | <ul><li>b1) Discuss the different methods of plant breeding and its application.</li><li>b2) Suggest programs for breeding to produce plants resistant or tolerant to different stresses, biotic or abiotic.</li></ul>                                                       |  |
| bbb. Professional Skills:               | c1) Perform laboratory and field tests for molecular markers for plant breeding.                                                                                                                                                                                             |  |
| ccc. General and Transferable<br>Skills | d1) Collect the knowledge from data sources, e.g., text books, scientific journals, internet, multimediaetc. d2) Organize and manage scientific seminars and presentation.                                                                                                   |  |

|     | 83. Course Contents:                                                                                                                                |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| No. | Topic                                                                                                                                               |
| 1   | Introduction, Importance of abiotic stress, Characteristics of abiotic stress                                                                       |
| 2   | Breeding for drought resistance, Effects of drought resistance plant growth and development                                                         |
| 3   | Types of drought environment, Drought resistance                                                                                                    |
| 4   | Genetic of drought resistance, Mineral stresses (salinity, mineral deficiency and mineral toxicity) and heat and cold resistance                    |
| 5   | Source of drought resistance, Relationship between drought resistance treat and yield.                                                              |
| 6   | Selection criteria, Breeding methods and approaches                                                                                                 |
| 7   | Difficulties in breeding for drought resistance, Mineral stresses (salinity, mineral deficiency and mineral toxicity ) and heat and cold resistance |

| 84. | Teaching and Learning Methods |                                                                       |

| 88. Course Aims |                                                                                                                                                                                                                                                                                                                        |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | <ul> <li>2/1- knowing the general concept of diseases.</li> <li>2/2- Understanding the relationship between diseases and diagnosis.</li> <li>2/3- Determining research subjects, collecting &amp; developing information and applying analytical and critical approach to knowledge about diseases control.</li> </ul> |

| a/1- classify the disease.                                                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| a/2- describe pathogen control methods. a/3- summarize plant parasitic relationship.                                                                  |
| b/1- Plan classification of disease.<br>b/2- Compare between relationship between pathogen and plant.<br>b/3- Interpret evidences weapons of attack   |
| c/1- Apply advanced professional skills in laboratory tests c/2- Form methods to evaluate different management methods.                               |
| c/3- Measure use enzyme in plant disease. d/1- Work on team. d/2- Communicate with others. d/3- Use Application of Computer in the Field of Interest. |
|                                                                                                                                                       |

| 91. | Course Aims |                                                                                                                                                                                                                                                                                           |
|-----|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|     |             | 2/1 introducing the fundamentals of plant gene technology. 2/2 acquainting students with the knowledge of various aspects of plant gene technology applications including Plant nuclear genes, plastid genes, plastid transformation application and Sequencing, isolation of plant genes |

| 92. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |
|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| eee. Knowledge and Understanding:                | a/1 Describe the basics of plant gene technology a/2 Summarize the basic Sequencing, isolation, hybridization and library of genes. Restriction endonucleases and production of recombinant DNA a/3 Express various aspects of Microarrays, DNA profiling & significance, protein profiling and its significances, bioinformatics a/4 Divide different gene transfer methods and classify different modification of introducing desirable traits to plants. |  |  |
| fff. Intellectual skills:                        | b/1 Plan, conduct and write a report on plant gene technology b/2. Analyze and solve problems of sequencing, hybridization and library of genes and genetic transformation b/3. Interpret antisense RNA expressions, molecular farming and virus resistant transgenesis b/4. Derive microarrays, DNA profiling & significance, protein profiling and its significances.                                                                                     |  |  |
| ggg. Professional Skills:                        | c/1 Apply, or adapt, practical instructions safely and accurately                                                                                                                                                                                                                                                                                                                                                                                           |  |  |

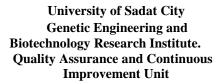

|                               | c/2 Execute a variety of experimental procedures in the laboratory. c/3 Form and devise experimental methods appropriate for tackling a particular problem c/4 interpret quantitatively the results of experiments undertaken by themselves or others Apply the genetic modified plants for improving the high yield and plant disease and insect resistances. |  |  |

| Course Code:            | Course Code: B3-51 Course Title: Plant Molecular Biology Methods |                   |  |     |  |  |
| No. units               | 3                                                                | Lec. 3 App. Level |  | MSc |  |  |
| Department              | Plant Biotechnology                                              |                   |  |     |  |  |

| 98. Course Aims |                                                                                                                                                                                              |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | 1. Studying cell and gene function in plants are growing rapidly in power and sophistication.                                                                                                |
|                 | 2. A course for investigators who are familiar with molecular biology and want to use plants as experimental organisms.                                                                      |
|                 | 3. Engaging in work with plant genes and in solving the many technical problems associated with advanced techniques in plant molecular biology.                                              |
|                 | 4. Preparing well-qualified students and researches in both academic and applied levels in order to have the ability to meet the changeable requirements of the field of plant biotechnology |

| 99. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                    |  |  |  |  |  |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|
| iii. Knowledge and Understanding:                | a/1) Summarize the different plant molecular biology methods.                                                                                                                                                      |  |  |  |  |  |
|                                                  | a/2) Describe the isolation, cloning and sequencing of DNA and RNA.                                                                                                                                                |  |  |  |  |  |
|                                                  | <ul><li>a/3) Classify the different methods of plant transformation.</li><li>a/4) Divide the type of plant tissue culture and molecular marker in crop improvement.</li></ul>                                      |  |  |  |  |  |
| jjj. Intellectual skills:                        | b/1) Derive the biological effects of using plant free pathogens, the different methods of micro-propagation in plants, the different methods of molecular markers and plant transformation and their application. |  |  |  |  |  |

# جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

|                                      | b/2) Plan programs for isolation, cloning and sequencing of DNA and RNA and compare among DNA and RNA in these methods . |  |  |  |  |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| kkk. Professional Skills:            | c/1) Perform laboratory and field tests for plant                                                                        |  |  |  |  |
|                                      | biotechnology.                                                                                                           |  |  |  |  |
|                                      | c/2) Apply the various methods for plant biotechnology.                                                                  |  |  |  |  |
| Ill. General and Transferable Skills | d/1) Collect the knowledge from data sources, e.g., text                                                                 |  |  |  |  |
|                                      | books, scientific journals, internet, multimediaetc                                                                      |  |  |  |  |
|                                      | d/2) Acquire of self confidence and leadership skills, Self-                                                             |  |  |  |  |
|                                      | , 1                                                                                                                      |  |  |  |  |
|                                      | learn and distance learn capabilities.                                                                                   |  |  |  |  |

| 100. | Course Contents:                                   |
|------|----------------------------------------------------|
| No.  | Topics                                             |
| 1    | Plant Cell and Tissue Culture                      |
| 2    | DNA and RNA Isolation from different cell types    |
| 3    | Cloning of DNA; cDNA and Genomic Library           |
| 4    | DNA and RNA Sequencing and Dot plots               |
| 5    | Molecular Markers in Plants and their applications |
| 6    | In Situ Hybridization                              |
| 7    | Plant Transformation and its applications          |

| 101. | Teaching and Learning Methods |     |                     |

**Department:** Plant Biotechnology

## **Course Specifications**

| 1. Course information: |                     |               |                      |      |  |       |     |  |
|------------------------|---------------------|---------------|----------------------|------|--|-------|-----|--|
| Course Code:           | Code: B3-55         | Course Title: | Somaclonal variation |      |  |       |     |  |
| No. units              | 3                   | Lec.          | 3                    | App. |  | Level | Msc |  |
| Department             | Plant Biotechnology |               |                      |      |  |       |     |  |

| 2. Course Aims |                                                                                                                                                              |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | 2-1 Improving knowledge of master graduate in identifying somaclonal variation causes, avoiding methods and how to achieve highest benefits of this problem. |
|                | 2-2-Transferring the most updated technologies in the area of somaclonal variation detection methods                                                         |
|                | 2-2 Enhancing the knowledge of application of somaclonal variation in plant breeding programs                                                                |

## 3. Intended Learning Outcomes of Course (ILO's) a. Knowledge and a1-. Express the attitudes and ethical basis in scientific research and in plant biotechnology and summarize main basics & ethics of scientific **Understanding:** researches. a2 Illustrate somaclonal variation, mutation and application of somaclonal variation a3.Summarize mechanisms of occurrence and methods of avoid somaclonal variation a4 know various methods of detection somaclonal variation b. Intellectual b1- Compare among different aspects of plant improvement through plant skills: molecular biology and cytogenetics, plant breeding and somaclonal variation b2.Discuss the plant tissue culture techniques causes of somaclonal variation. b3.-Suggest favorable method and technique for detect somaclonal

- Libraries and internet research (self

learning)

|     |                                                                                          | variation.<br>b4 -Evaluate the various methods for induction somaclonal variation.                                                                                                                                                                                                                          |  |  |  |

|                                  | plant propagation.                                            |
|                                  | a/3 Classify the fundamentals of seed aging and storage.      |
|                                  | a/4 Summarize Basic facts, theories of the plant              |
|                                  | biotechnology and related subjects.                           |
| nnn. Intellectual skills:        | b/1- Compare link between the plant biotechnology and the     |
|                                  | application .under Egyptian environment.                      |
|                                  | b/2 Analyze and discuss the various types of plant cell       |
|                                  | cultures.                                                     |
|                                  | b/3 Compare Classify the different methods of                 |
|                                  | micropropagation of plants.                                   |
|                                  | b/4 Derive solving some problems that don't conform to        |

**Skills** 

جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

classic data of plant biotechnology.

c/1 Apply the various methods for application of tissue cultures.
c/2 Apply practice the field evaluation of the transformations and regenerants and different species of the plants.
c/3 Execute programs and methods for plant breeding and improvement through different ways.
c/4 Measure and evaluation methods and tools used in plant biotechnology fields.

ppp. General and Transferable

d/1 Work effectively in a team.

professional practice.

d/2 Acquire of self confidence and leadership skills.

d/3 Participate in workshops and training courses d/4 Use information technology to improve his/her

|             | <ul> <li>Transferring the most updated skills and technologies in the area of plant biotechnology to the scientific staff via accomplishment of workshops, meetings and conferences.</li> <li>Enhancing students and researches capabilities and storming their intellectual and practical skills.</li> <li>Providing training in scientific skills of problem analysis, research design, evaluation empirical evidence and dissemination in the context of biological sciences.</li> </ul> |

| Intended Learning<br>Outcomes of Course<br>(ILO's) |                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| a-Knowledge and<br>Understanding:                  | a1 Express the attitudes and ethical basis in scientific research and in plant biotechnology and summarize main basics & ethics of scientific researches.  a2 Define the tissue culture methods and illustrate tissue culture application.  a3 Explain methods production protoplast, virus free plants, haploid plants and somatic hybridization.  a4 Train in use somaclonal variation in plant breeding through tissue culture technique. |
| b-Intellectual skills:                             | b1Derive issues which the Scientifics facing during plant improvement and biotechnology and take a professional decision for suitable methods to improve the productivity and quality of plants.  b2 Discuss uses of somaclonal variation in plant breeding.                                                                                                                                                                                 |

|                          | b3 Design a protocol for producing one of the application of tissue culture. b4 Evaluate the methods of somatic hybridization. |  |  |  |  |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| c-Professional Skills of | c1 Prepare technical reports and scientific essay.                                                                             |  |  |  |  |
| course:                  | c2 Solving problem related with plant using tissue culture                                                                     |  |  |  |  |
|                          | techniques.                                                                                                                    |  |  |  |  |
|                          | c3 Train in cryopreservation <i>in vitro</i> , production of haploid plants.                                                   |  |  |  |  |
|                          | c4 Apply the various methods for application plant tissue cultures.                                                            |  |  |  |  |
| d-General and            | d1 Take professional decision for suitable methods in plant                                                                    |  |  |  |  |
| Transferable Skills      | biotechnology subjects                                                                                                         |  |  |  |  |
|                          | d2 Collect the knowledge from data sources, e.g., text books,                                                                  |  |  |  |  |
|                          | scientific journals, internet, multimediaetc.                                                                                  |  |  |  |  |
|                          | d3 Acquire of self confidence and leadership skills                                                                            |  |  |  |  |
|                          | d4 Organize and manage scientific seminars and presentation and                                                                |  |  |  |  |
|                          | self-learn and distance learn capabilities                                                                                     |  |  |  |  |

| 11. Course Aims |                                                                                                                                                                                                                                                                                                               |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | <ol> <li>Introducing students to the basic biological concepts, methodologies and issues associated with transgenic crop plants.</li> <li>Improving by introducing foreign genes.</li> <li>Confirming transgenic crops at molecular level.</li> <li>Impact of transgenic crops on the environment.</li> </ol> |

| 12. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| qqq. Knowledge and Understanding:                | a/1 Express and Outline the fundamentals and application of plant protoplast and genetic transformation. a/2 Describe the selectable marker genes and their use in transgenic plants. a/3 Summarize the different molecular confirmation methods of transgenic plants.                                                                                  |
| rrr. Intellectual skills:                        | b/1 Analyze the different methods of plant transformation and its application. b/2 drive and plan to produce transgenic plants resistant or tolerant to different stresses, biotic or abiotic. b/3 Compare among different methods of plant transformation and field performance of the transgenic plants and their application in plant biotechnology. |
| sss. Professional Skills:                        | c/1 Interpret the applying of genetic modified plants for improving the high yield and plant disease and insect resistances. c/2 Measure the transformation and regeneration efficiency                                                                                                                                                                 |

|                               | depending on type of tissue and transformation methods.  |  |
|-------------------------------|----------------------------------------------------------|--|
| ttt. General and Transferable | d/1 Work effectively in a team.                          |  |
| Skills                        | d/2 Acquire of self confidence and leadership skills.    |  |
|                               | d/3 Participate in workshops and training courses.       |  |
|                               | d/4 Take a professional decision for suitable methods of |  |
|                               | genetic transformation.                                  |  |

|     | 13. Course Contents:                                      |
|-----|-----------------------------------------------------------|

## جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

d/6- Work in teams and lead work teams in different professional

Practice independent learning and seek continuous learning.

c/3- Apply various methods for reading background seminar materials.

c/4- Execute some different handouts and visual aids related to seminars.

d-General and Transferable
Skills

d/1- Communicate effectively using all methods.
d/2- Use information technology to improve his/her professional practice.
d/3- Practice self appraisal and determine his/her learning needs.
d/4- Use different scientific data resources (text books, journals, periodicals and internet web sites) to gain scientific knowledge and data.
d/5- Determine standards for evaluation of others.

d/7- Manage effectively time.

contexts.

| 2. Course Aims |                                                                                                                                                                          |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | 2-1-Improving skills of the Master graduate in plant tissue culture, identifying problems and using available resources to solve them & to achieve the highest benefits. |
|                | 2-2-Enhancing practical skills of graduated students in tissue culture techniques 2-3-Improvement thinking and analytical ability of students.                           |

| 3. Intended Learning<br>Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| a. Knowledge and Understanding:                    | a1-Describe the principles of plant tissue culture techniques, methods of plant diseases control, and the main concept of somatic embryogenesis, micropropagation, micrografting and microtuber. a2-Aware with the different methods of miropropagation, production plant disease-free and the main scientific applications of using biotechnology, plant tissue culture and genetic engineering on the field of plant biotechnology. a3-Training in designing of simple tissue culture experiments and analysis data using computer program |
| b. Intellectual skills:                            | b1-Interpret different information to solve the problems of different stress facing plant biotechnology and propagation. b2-Analyzing and evaluating information (measuring – devising – decision making) in plant tissue culture                                                                                                                                                                                                                                                                                                            |

b3-Innovate simple methods for present his or her recorded results b4-Evaluate different methods of virus free production, microsomatic embryogenesis production and production grafting, secondary metabolites c.Practical and Professional c1-Apply the different methods for plant propagation methods, Skills of course: producing of virus -free plants, micro grafting methods, producing secondary metabolites and somatic embryos. c2-prepare a protocol for solving problem related with tissue culture techniques c3-Estimate methods of data analysis d.General and Transferable d1-Work in teams and manage time effectively. **Skills** d2-Show management skills for using information d3-Technology to improve his professional practice in internet and relative information.

d4-Treat by Efficiency in self-learn and distance learn capabilities.

| 4   | Course Contents:                                                                                                                                    |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| No. | Topic                                                                                                                                               |
| 1   | Experiments in solving physiological disorders.(training session: design and follow up experiment in factors affecting physiological disorders)     |
| 2   | Experiments in production of free virus plants.                                                                                                     |
| 3   | Experiments in micro-grafting (training session: training in mcrografting)                                                                          |
| 4   | Experimen.ts in production bulbs <i>in vitro</i> and cryopreservation (training session: design a trail to produce microtubers)                     |
| 5   | Experiments in producing somatic embryos. (training session: follow up experiments)                                                                 |
| 6   | Experiments in production of secondary metabolites.( training session: design a protocol for producing secondary metabolites)                       |
| 7   | Training in using analysis program for data analysis and make a design of scientific paper (training session: analysis data of various experiments) |

| 5. Teaching and Learning Methods |                                                                                                                                   |

| 33. Course Aims |                                                                                                                                                                        |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | 2/1 Determining different genes related to pathogen life cycle and gene expression.                                                                                    |
|                 | 2/2 Understanding the use of different molecular marker tools                                                                                                          |
|                 | 2/3 Explaining different plant disease control mechanisms                                                                                                              |
|                 | 2/4 Determining research subjects, collecting & developing information and applying analytical and critical approach to knowledge in the field of plant biotechnology. |

| 34. Intended Learning Outcomes of Course (ILO's) |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| yyy. Knowledge and Understanding:                | <ul> <li>a/1 Clarify difference between molecular markers and its application in plant pathology research</li> <li>a/2 Explain pathogen control methods under the Egyptian environment</li> <li>a/3 Express the fundamental of ethical and legal practice and their use in genetically modified plants</li> <li>a/4 Remolde the actual quality standards of the practical analysis and determination of plant biotechnology.</li> <li>a/5 Summarize basics of the various pathogen diagnosis methods.</li> </ul> |
| zzz. Intellectual skills:                        | b/1 Determine problems in pathogen control related to plant biotechnology. b/2 Find solution for the majority of pathogens using                                                                                                                                                                                                                                                                                                                                                                                 |

# جامعة مدينة السادات معهد بحوث الهندسة الوراثية والتكنولوجيا الحيوية وحدة ضمان الجودة والتطوير المستمر

| aaaa. Practical and Professional<br>Skills: | different diagnostic tools. b/3 Suggest research studies that add knowledge to the existing plant biotechnology. b/4 Innovate solutions regarding pathogen control and the new arisen pathogen variants  c/1 Select advanced professional skills in molecular markers c/2 Estimate methods to evaluate different control methods. c/3 Test the different analytical methods for analysis of pathogen genes. c/4 Diagnose of the plant diseases and different scientific problems in the field of plant biotechnology. |
|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| bbbb. General and Transferable<br>Skills    | <ul> <li>d/1 Active communication by its different &amp; effective methods.</li> <li>d/2 Using different resources for obtaining data, knowledge, and information in the field of plant biotechnology.</li> <li>d/3 Work in team; manage teams in different professional trends.</li> <li>d/4 Continuous self learning.</li> </ul>                                                                                                                                                                                    |

|     | 6-Course Contents:                                                       |

# **Matrix of Knowledge, Skills ILOs for Education Course** C-89 Molecular methods in plant pathology I

| Course<br>Contents                                                       | Week No. | a-Knowledge<br>and<br>Understanding | b-<br>Intellectual<br>skills | c-Practical<br>and<br>Professional<br>Skills of<br>course | d-General<br>and<br>Transferable<br>Skills |
|--------------------------------------------------------------------------|----------|-------------------------------------|------------------------------|-----------------------------------------------------------|--------------------------------------------|
| Molecular<br>genetics of plant<br>pathogenic<br>bacteria                 | 1&2      | a/5                                 | b/3                          | c/3                                                       | d/1, d/3, d/4                              |
| Molecular<br>genetics of plant<br>pathogenic fungi                       | 3&4      | a/5                                 | b/3                          | c/3                                                       | d/3, d/4                                   |
| Molecular<br>genetics of plant<br>pathogenic<br>viruses                  | 5&6      | a/5                                 | b/3                          | c/3                                                       | d/3, d/4                                   |
| Impacts of molecular diagnostic technologies on plant disease management | 7&8      | a/3, a/4                            | b/2                          | c/4                                                       | d/3, d/4                                   |
| Molecular<br>genetics of plant<br>disease control                        | 9&10     | a/2                                 | b/1, b/4                     | c/2                                                       | d/3, d/4                                   |
| Genetic<br>markers: RFLP,<br>AFLP and<br>Microsatellites                 | 11&12    | a/1                                 | b/4                          | c/1                                                       | d/2, d/3, d/4                              |
| Genetic<br>markers: DNA<br>sequences and<br>SNPs                         | 13&14    | a/1                                 | b/4                          | c/1                                                       | d/2, d/3, d/4                              |

Course coordinators: Dr. Amal Mahmoud and Dr. Mostafa Alansary

Head of Department: Prof, Haroun Abou Shama
